AUTHOR: Mayorov, A. I.; Prukhnikov, I. N.

TITLE: Field fortification structure. Class 72, No. 163924

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 13, 1964, 116

TOPIC TAGS: structural engineering, military engineering, defense installation

Translation: A field fortification structure, consisting of a trench, a load-bearing construction with a flexible casing and ground sprinkling. The distinguishing feature is simplification of the device and its utilization. The load-bearing construction is made in the form of a system of spaces which form strips with vents and fasteners fastened to them, made of an elastic and strong fabric or synthetic film, filled with packed earth and forming an arched covering. Orig. art. has: 2 figures.

PROCESSES AND PROPERTIES INDEX

***On the Properties of Oxide Films and Methods for Their Production.** N. V. Alexandrov, V. I. Prujinina, and N. N. Sokolov (*Elektrichestvo* (*Electricity*), **1933**, (14), 17–25).—[In Russian.] A suitable bath for the production of oxide films especially on Duralumin is described and the effect of current conditions and impurities in the metals on film formation is discussed. Elasticity of the film is due to the presence of copper (2–5%). The thickness of oxide films varies between 1μ and 0·5 mm., depending on the method and time of formation. The influence of corrosion and other factors on the resistance to perforation has been studied. Up to 400°–500° C. the thermal conductivity of the films remains practically unaltered.—N. A.

**Galvano-magnetic phenomena in mica.** V. PRUJININA-URANOVSKAJA (Compt. rend. Acad. Sci. U.R.S.S., 1938, **21**, 367—370).—In fields $\sim 10^5$ v. per cm. a transverse galvano-magnetic (Hall) effect of $10^{-3}$—$10^{-4}$ v. is observed at 350°; with similar field strengths the longitudinal galvano-magnetic effect varies from $10^{-2}$ to $10^{-3}$ v. between 125° and 355°. The greater magnitude of the longitudinal effect suggests that the conductivity in mica is effected by fixed electrons. D. F. R.

"Some Practical Suggestions Concerning the Prevention and Treatment of Bacillary Dysentery."

Bucharest, Revista Sanitara Militara, Vol 62, No 1, Jan-Feb 66, pp 155-160.

Abstract: Practical suggestions are given for the prevention and treatment of bacillary dysentery in military units. The author stresses that judicious application of the available methods can result in complete prevention of the disease.

Manuscript submitted 15 April 1965.

2551. Prus, A. A. A new machine for torsion tests on wire (in Russian), *Zavod. Lab.* 21, 4, p. 489, 1955; Rev. no. 1864, *Ref. Zh. Mekh.* 1956.

A description of the layout and construction of a machine with a pendulum for measuring the torsional moment and a separate meter for the angle of twist of the sample. This latter is determined as the difference of the angles of rotation of two gear wheels attached on the wire sample under test; which excludes distortion of the readings by the effect of the machine grips. A registering device is incorporated.

Machines have been built on this principle up to 40 – 400 kg/cm.

"Hospital Infection Due to Salmonella Enteritidis in Infants," Warsaw, Przeglad Epidemiologiczny, Vol 16, No 3, 62, pp 231-236.

Abstract: [Authors' English summary modified] Authors report on an outbreak of S. enteritidis in the hospital affecting 10 babies and lasting four months. Clinical observations revealed three forms of the infection, one involving the central nervous system, the second acute enterocolitis with infection of the upper respiratory tract, and the third toxic diarrhea. There were four fatalities, the source of infection was not determined, but the babies were under antibiotic treatment. No correlation was found between the age of the babies and either severity or form of the infection. Six references, of which three are Polish, and three Western.

Author : Plasil Zbynek, Prusa Jaromir
Title : Polarographic Determination of Bismuth and Lead in Ore

Orig Pub : Rudy, 1956, 4, No 7, 215-117

Abstract : To determine Bi and Pb ore they are first separated from Cu, Sb, Ti, Sn, Fe and As, by extraction with chloroform from solution containing KCN and diethyl-dithiocarbamate of Na (I). 0.5-2.0 g sample evaporated to dryness with 20 ml of aqua regia, and then with 15 ml concentrated $HNO_3$. The residue is dissolved in 20 ml concentrated $HNO_3$ and diluted with water to 100ml. To 10-50 ml of the solution so obtained are added 10 ml of 10% solution of Rochelle salt, several drops of 1% alcoholic solution (60% alcohol) of phenolphthalein; after neutralization with 10% solution of NaOH there are added 10 ml 10% KCN,

5-10 ml 1% solution of I and the mixture is extracted 3 times with 10 ml $CCl_4$, shaking each time for 3-5 minutes. The combined aqueous phase is evaporated successively with 20 ml of concentrated $HNO_3$, 5 ml 30% solution $H_2O_2$ and 10 ml concentrated HCl, to dryness. The residue is dissolved in 25 ml concentrated HCl, combined with 5 ml 0.1% aqueous solution of methylene blue, and diluted to 100 ml. Polarographic determination is carried out on a Heyrovsky polarograph of V-301s type with Z9a type galvanometer. Polarographic curves are recorded at 20°. Half-wave potential $E_{\frac{1}{2}}$ Bi - 0.14v, Sn/sic/ - 3.46v. Determination is interfered with by Tl ($E_{\frac{1}{2}}$ - 0.48v).

Title : Polarographic Determination of Chromium in Ore.

Orig Pub. : Chem. listy, 1958, 52, No 5, 915-917

Abstract : It was found that in polarographic determination of Cr in Cr-ore and its processing products, interfering effect of Pb, Cd, Cu, Sb, Ni, Bi, and other associated elements can be eliminated by masking with phenylimino acetic acid (I) in the presence of NaOH and NaCl. On this basis a method of direct polarographic determination of Cr has been developed, which yields results that are in good agreement with the data of photometric and titrimetric procedures. In the above-stated medium $E_{1/2}$ $CrO_4^{2-}$ is - 0.89 v (relative to saturated calomel electrode); height of the well defined wave is directly proportional to Cr concentration. Optimal composition of polarographic background 0.1-0.3 M NaOH +

Abstract : + 0.1 M I; with this background polarography of 1 mg Cr in 100 ml solution is not interfered with by presence of up to 50 mg Pb. On increase of concentration of NaOH above 1.5 M the Pb is demasked and its wave merges with Cr wave. Use of $Na_2O_2$ with small addition of $Na_2CO_3$, or without it, for decomposition of Cr-ore has the advantage that Cu and Bi remain in the insoluble residue. Only with an excess of Cu can the interfering effect become apparent, due to dissolved $CuO_2^{2-}$ anions, the reduction wave of which can however be suppressed by introduction of KCN following addition of I. Of the metals, besides the above-stated, only Tl interferes,

Abstract : if the ratio Tl:Cr is greater than 1:1. Best results were obtained on using 1 g sample of ore containing 0.1-10% Cr. 0.2-2 g of sample are mixed with 5-7 g $Na_2O_2$ in a pyrolan crucible, an additional 3-5 g $Na_2O_2$ are placed on top, the mixture is heated to red-heat temperature and fused in the flame of a gas burner for about 5 minutes. After cooling the melt is dissolved in 100-150 ml water, 10 ml 30% $H_2O_2$ are carefully added to the solution, followed by water to adjust to 250 ml, after which the solution is heated on a sand bath until $O_2$ is completely removed. 25 ml of resulting solution are neutralized to phenolphthalein with hydrochloric acid, 10 ml concentrated HCl are added, followed by 10 ml

"Acute Diarrhoeic Syndromes as Cause of Death in Infants."

Warsaw-Krakow, Przegląd Lekarski, Vol 19, Ser II, No 2, 31 Jul 62, pp 307-310

Abstract: [Authors' English summary modified] Authors analyze 100 fatal cases of babies admitted during 1956-1959 with diarrhoea. Largest percentage occurred at age of 1-2 months, with 90% of them bottle fed, and 79% from working or rural families. Majority were under full care of non-working mothers, mostly young or with many children. Origin of diarrhoea could be traced (Salmonella or Shigella) in only 60% of the cases. The authors interpret these data as improper infant feeding due to ignorance of mothers, and call for a program of education on the subject in the higher classes of primary and vocational schools. One Polish and one English references.
